INTRODUCTION

The adoption of the Common Core State Standards for Mathematics calls for shifts in focus, coherence, and rigor. The teaching of the standards should be focused on the important content, coherent from one grade level to the next, and rigorous in requiring conceptual understanding, fluency, and application. Within this area of application, FOSS provides fertile ground for the use of mathematics.

The FOSS Program integrates mathematics with science in two ways throughout the grade 3 modules. In active investigations, students apply mathematics during data gathering and analysis. In addition, the Interdisciplinary Extensions at the end of each investigation usually include a math problem of the week. These problems enhance the science learning by providing hypothetical data for students to analyze or in some way relate to the context of the investigation. The notes explain for the teacher the problem and describe how students might approach its solution. The problems are prepared for distribution to students on duplication masters in the Teacher Masters chapter of Teacher Resources.

This chapter gives an overview of how FOSS addresses the Common Core State Standards for Mathematics through science. It also points out specific instances in which students exercise those skills during science instruction.
Mathematical Practices

Mathematical practices consist of eight processes and proficiencies that are important for all students.

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

Within the context of science, students use some of these mathematical practices on a regular basis. According to Next Generation Science Standards (volume 2, appendix L, p. 138), the three CCSSM practice standards most directly relevant to science are:

- MP.2. Reason abstractly and quantitatively.
- MP.5. Use appropriate tools strategically.

When students reason abstractly and quantitatively and model with mathematics, they are using math in context. They work with symbols and their meanings and represent and solve word problems. Students choose and correctly use the available tools to collect data and solve problems. In the grade 3 modules, students engage with these three practices during the active investigation and by completing the problem of the week at the end of each investigation. Here are some examples.

In solving the problem of the week for Investigation 2 of the Water and Climate Module, students determine the amount of liquid water to add to different containers, so that when the water freezes, the ice fills the container to the brim. In order to solve this, students reason quantitatively and use mathematics in the context of science. They use the information that you need 45 mL of water to produce 50 mL of ice. For every 50 mL of ice, you need to subtract 5 mL to account for expansion. Students can use a model: determine how many groups of 50 mL are in the container, then subtract 5 mL for each group. So if there are ten groups of 50 mL in the container, they need to subtract ten groups of 5 mL to account for expansion.
In the Structures of Life Module, students determine the lifespan of two different owls in captivity and in the wild. Students model both multiplication and subtraction to solve two of the problems and reason quantitatively, using fractions, to solve another problem.

In the Motion and Matter Module, students are asked to reason abstractly to determine the order of tops given certain clues. This requires students to manipulate the tops either abstractly or using concrete tops they have cut out.

**Mathematical Content**

The mathematical content in third grade is organized around four concepts.

- Operations and algebraic thinking
- Number and operations in base 10
- Number and operations—fractions
- Measurement and data

The following pages have a table that identifies the opportunities to engage students in developing these mathematical concepts as well as those learned in grade 2. It lists the math content for second and third grades and points out relevant opportunities in the three FOSS modules for grade 3.
## OPERATIONS AND ALGEBRAIC THINKING

**Standard Motion and Matter Module**

Use place value understanding and properties of operations to add and subtract.

1. Understand a fraction \(\frac{1}{b}\) as the quantity formed by 1 part when a whole is partitioned into \(b\) equal parts; understand a fraction \(\frac{a}{b}\) as the quantity formed by \(a\) parts of size \(\frac{1}{b}\).
## MEASUREMENT AND DATA

### Standard | Motion and Matter Module
--- | ---
**Measure and estimate lengths in standard units.** | Inv 1, Part 2, Step 5. Conduct the investigation in pairs
1. Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes. | Inv 3, Part 2, Step 7. Use the meter tape to measure the distance
Inv 3, Part 2, Step 22. View online activities
Inv 3, Home/School Connection
Inv 4, Part 3, Step 7. Monitor measures
4. Measure to determine how much longer one object is than another, expressing the length difference in terms of a standard length unit. | Inv 3, Part 3, Step 7. Guide progress as needed

### Represent and interpret data.
9. Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Show the measurements by making a line plot, where the horizontal scale is marked off in whole-number units. | Inv 2, Part 2, Step 2. Begin a bean growth chart
Inv 3, Extensions: Measure the amount a crayfish eats

10. Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories. Solve simple put-together, take-apart, and compare problems using information presented in a bar graph. | Inv 2, Extensions: Compare rollers and spinners

Solve problems involving measurement and estimation of intervals of time, liquid volumes, and masses of objects.

1. Tell and write time to the nearest minute and measure time intervals in minutes. Solve word problems involving addition and subtraction of time intervals in minutes, e.g., by representing the problem on a number line diagram.

2. Measure and estimate liquid volumes and masses of objects using standard units of grams (g), kilograms (kg), and liters (L). Add, subtract, multiply, or divide to solve one-step word problems involving masses or volumes that are given in the same units, e.g., by using drawings (such as a beaker with a measurement scale) to represent the problem.

View online activity: “Measuring Mass”
Inv 4, Part 1, Step 7. Conduct investigations
Inv 4, Part 2, Step 6. Start the investigation
Inv 4, Part 3, Step 7. Monitor measures |
### Structures of Life Module

- Inv 1, Part 3, Step 5. Weigh dry lima bean seeds
- Inv 1, Part 3, Step 11. Weigh the soaked lima bean seeds
- Inv 1, Extensions: Determine the mass of multiple seeds
- Inv 3, Extensions: Compare the mass of crayfish

### Water and Climate Module

- Inv 1, Part 3, Step 5. Conduct the investigation
- Inv 1, Part 3, Step 11. View online activities
- Inv 1, Extensions: Weigh water and Capture raindrops
- Inv 2, Part 1, Step 11. Mix hot and cold water
- Inv 2, Part 4, Step 5. Set up the containers to be frozen
- Inv 2, Part 4, Step 14. Observe the syringes and vials
- Inv 2, Extensions: Freeze salt water and Compare the densities of salt and plain water
- Inv 3, Part 1, Step 4. Go outdoors
- Inv 3, Part 1, Step 6. Collect and share weather data
- Inv 3, Part 1, Step 12. Make comparisons
- Inv 3, Part 3, Step 3. Set up the tray
- Inv 3, Part 3, Step 6. Measure the evaporation results
- Inv 3, Part 4, Step 6. Measure water
- Inv 3, Part 4, Step 12. Measure the water
- Inv 5, Part 1, Step 5. Get equipment and begin

### Inv 5, Extensions: Compare different soils
### Represent and interpret data.

3. Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. Solve one- and two-step “how many more” and “how many less” problems using information presented in scaled bar graphs. For example, draw a bar graph in which each square in the bar graph might represent five pets.

### Geometric measurement: understand concepts of area and relate area to multiplication and to addition.

5. Recognize area as an attribute of plane figures and understand concepts of area measurement.
   a. A square with side length 1 unit, called “a unit square,” is said to have “one square unit” of area, and can be used to measure area.
   b. A plane figure which can be covered without gaps or overlaps by $n$ unit squares is said to have an area of $n$ square units.

6. Measure areas by counting unit squares (square cm, square m, square in, square ft, and improvised units).
### Structures of Life Module

- Inv 1, Part 1, Step 7. Count and graph the seeds in the pods
- Inv 2, Problem of the week
- Inv 3, Part 2, Step 35. Have a sense-making discussion
- Inv 3, Problem of the week
- Inv 4, Part 4, Step 13. Create a thumbprint bar graph

### Water and Climate Module

- Inv 1, Problem of the week
- Inv 4, Part 1, Step 7. Make bar graphs of the weather data
- Inv 4, Problem of the week

### Geometric Measurement: Understand Concepts of Area and Relate Area to Multiplication and Addition

- Recognize area as an attribute of plane figures and understand concepts of area measurement.
  - A square with side length 1 unit, called “a unit square,” is said to have “one square unit” of area, and can be used to measure area.
  - A plane figure which can be covered without gaps or overlaps by \( n \) unit squares is said to have an area of \( n \) square units.

- Measure areas by counting unit squares (square cm, square m, square in, square ft, and improvised units).

- Inv 3, Part 3, Step 11. Read “Surface-Area Experiment”
- Inv 3, Extensions: Measure and graph surface area

- Inv 3, Part 3, Step 11. Read “Surface-Area Experiment”
- Inv 3, Extensions: Measure and graph surface area
