INTRODUCTION

Each FOSS investigation follows a similar design to provide multiple exposures to science concepts. The design includes these pedagogies.

- Active investigation, including outdoor experiences
- Writing in science notebooks to answer focus questions
- Reading in FOSS Science Resources
- Assessment to monitor progress and motivate student reflection on learning

In practice, these components are seamlessly integrated into a continuum designed to maximize every student’s opportunity to learn. An instructional sequence may move from one pedagogy to another and back again to ensure adequate coverage of a concept.

The FOSS instructional design recognizes the important role of language in science learning. Throughout the pedagogical design elements, students engage in the practices of the Common Core State Standards (CCSS) for English Language Arts (ELA). The purpose of this chapter is to provide the big picture of how FOSS provides opportunities for the development and exercising of these practices through science. On the following pages, there is a chart that identifies the opportunities for second grade and where the relevant opportunities are found within the three FOSS modules.
Guiding Principles

When integrating language-arts instruction with FOSS, keep in mind these guiding principles:

• FOSS investigations follow a clear and coherent conceptual flow and a consistent instructional design. Students develop science knowledge by building a framework of concepts and supporting ideas.

• Common Core State Standards for ELA are introduced, developed, and practiced in the context of learning science content and engaging in the science and engineering practices. Students read and comprehend complex science texts related to their prior experience and knowledge. They write informational/explanatory texts, arguments to support claims, and narratives about experience in science. They engage in collaborative discussions about science and learn new vocabulary and language structures in context.

• The decision to use additional science texts, writing tasks, oral discourse opportunities, and vocabulary development activities is based on how well they address the science as well as the ELA standards.

• Instruction is differentiated to meet the needs of all students; the linguistic accommodations that are made for English learners support comprehensible input and accelerate academic language development. Language objectives for English learners in science instruction include the application of strategies that support construction of meaning from academic discussions and complex text, participation in productive discourse, and the ability to express ideas in writing clearly and coherently according to task, purpose, and audience.

• Formative assessment tools are used routinely to measure progress toward science understanding, use of science and engineering practices, and meeting literacy and language development goals. Assessment is viewed as a way to make student thinking visible and to determine next steps for instruction for both science and literacy. Instruction includes opportunities for students to assess themselves and peers.

Second grade is an exciting year as students increase independence in making meaning from texts read aloud and on their own. Their vocabularies increase and they are continuing to develop their communication skills. Second graders are expected to use the science and engineering practices to demonstrate their understanding of the
core ideas. To accomplish this, students learn to find patterns and evidence in texts, describe how images support ideas, use text features to locate information, and communicate their ideas orally and in written form using models, drawings, and writing.

**Instructional Flow**

In almost all investigations, the instructional flow is the same and provides these opportunities for effective integration of ELA standards.

- **When setting the context** for the lesson, students activate prior knowledge through class or small-group discussions where they ask and answer questions to clarify comprehension, gather additional information, and deepen understanding (SL 3), or recount information. (SL 4).

- During the **active investigation**, students are expected to work with partners and in collaborative groups, and to engage in teacher-led discussions where they build on each other’s ideas and ask for clarification and further explanation as needed. (SL 1).

- In the **data management** phase, students make observations, record, and organize data in their notebooks. (W 7) The notebook provides a space for students to recall information from experiences and to gather information to answer the focus question. (W 8) and to use words and phrases acquired through conversations and readings. (L 6).

- The **analysis** phase involves discussing data, constructing and writing explanations, and engaging in argumentation. Here students are making meaning by writing explanatory texts (W 2), writing opinion pieces supporting a point of view with reasons. (W 1), or participating in a shared research or writing project. (W 7).

- **Reading** articles in *FOSS Science Resources* and other recommended readings provides a plethora of opportunities to address all the third-grade reading standards for informational text.

- Lastly, the **assessment** tools and next-Step strategies for engaging students in high-level critical thinking support the development of the CCSS capacities of the literate individual: demonstrate independence, build strong content knowledge, comprehend as well as critique, and value evidence.

Again, we have provided you with some examples of how FOSS connects to the second-grade ELA standards; there are many more opportunities waiting to be created and explored by you and your students.

| 1. Participate in collaborative conversations with diverse partners about grade 2 topics and texts with peers and adults in small and larger groups.  
   a. Follow agreed-upon rules for discussions (e.g., gaining the floor in respectful ways, listening to others with care, speaking one at a time about the topics and texts under discussion).  
   b. Build on others’ talk in conversations by linking their comments to the remarks of others.  
   c. Ask for clarification and further explanation as needed about the topics and texts under discussion. | All investigations provide students ample opportunities to engage in collaborative discussions. Students discuss before, during, and after the active investigation, when reading articles in the FOSS Science Resources, and during the Wrap-Up/Warm-Up section.
