A student told her friend, "Astronauts are the most important way we learn about the solar system. They've traveled to distant places, measured the atmosphere, and collected samples that are sent back to Earth."

If you were the friend, when would you say to the student to help her understand the ways we learn about the solar system?

"Astronauts are the most important way we learn about the solar system. They've traveled to distant places, measured the atmosphere, and collected samples that are sent back to Earth."
