## SCIENCE NEWS

Dear Family,

Our class is beginning a scientific study of insects and plants. We will be caring for and investigating several different insects, and growing a plant from seed, to find out about their lives. Some of the insects that will be visiting our class undergo complete metamorphosis, as in the classic case of the butterfly—egg to caterpillar to chrysalis to butterfly. Other insects reach maturity by growing through a less dramatic sequence of stages in a process known as simple metamorphosis. The plant we will grow will go through its full life cycle—seed to plant to flower to seed—in just one month. Your child may demonstrate a heightened interest in insects and plants over the next several weeks.

One goal of our work with insects is to help the children develop a deeper appreciation for the diversity of life and to cultivate a sense of respect for all living things. If your child wants to catch an insect in a jar, please invite your child's insect friend into your home for a short time, and encourage him or her to return the insect to the wild after a short captivity. If you are interested in seeing what we have going on, as usual you are invited to visit and take part in the excitement. We're looking forward to lots of fun and lots of learning as we explore a world full of insects! You can get more information on this module by going to [www.FOSSweb.com](http://www.FOSSweb.com).

Sincerely,
